JOURNAL OF PHARMACOKINETICS AND BIOPHARMACEUTICS

Volume 5, 1977

A journal devoted to illustrating the importance of pharmacokinetic and biopharmaceutical applications in the understanding of drug action, design, therapy, and evaluation. Experimental and theoretical papers deal with: kinetics of drug disposition; clinical pharmacokinetics; time course of pharmacological response; factors affecting formation and disposition of drug metabolites; studies in drug release from dosage forms; dosage form developments and their evaluation in animals and man; bioavailability studies—*in vitro* and *in vivo* correlations; and application of computers to pharmacokinetic analysis. All papers show some correlation with data describing the time course of drug disposition or action, or both, in animals and man.
